TeraThink Achieves CMMI Level 3

Appraisal is significant milestone for company that has been providing reliable IT solutions to the federal government since 2002

RESTON, Va., Dec. 16, 2011 — TeraThink Corporation, a provider of management and technology consulting services to the federal government, announced today that it has been appraised by the Software Engineering Institute's (SEI) Capability Maturity Model Integration® (CMMI) as a Level 3 organization.

"This achievement is another major milestone for TeraThink," said Paul Lombardi, President and Chief Executive Officer of TeraThink. "We always strive to improve quality, service levels, and the overall customer experience of our federal government partners and customers. This appraisal demonstrates the rigor we place around processes to support these goals."

CMMI is a process improvement approach that provides organizations with the essential elements of effective processes. It can be used to guide process improvement across a project, a division, or an entire organization. TeraThink process improvement initiatives enable consistent process performance by providing a basis for stabilizing, analyzing, and improving performance across software and systems engineering projects.

For large software, engineering, and technical contracts, CMMI has become a differentiator that is increasingly desired by government customers. Very few small businesses have been appraised at Level 3. This provides a platform for continued quality and delivery enhancement for our customers.
